[SUB 2025]

Small but powerful!

In their eternal search for happiness ... people so often find it in little things. When we hear something big coming from what we can see to be small – that's when amazement sets in.

◀ **Siblings**
Left: SUB 2030
Right: SUB 2025

▶ **Ready to receive, just like the larger SUB 2030**
The picture shows the wireless receiver from the optional ELAC Wireless Stereo Set attached to the rear panel of the SUB 2030.

It might be one of ELAC's most compact subwoofers, but it doesn't hold back in making its presence felt. Thanks to its powerful amplifier and 200 mm drive unit, it feels right at home in small to medium-sized rooms of up to around 25 m² and always reproduces deep bass with the utmost precision. It's the ideal choice for those wishing to add bass extension to bookshelf loudspeakers such as the BS 192. It's also the perfect partner to satellite speakers in a home-cinema system.

The SUB 2025 offers excellent connectivity and can be connected to AV receivers and pre-/integrated amplifiers equipped with LFE, SUB or Pre-Out outputs. If you prefer to operate the SUB 2025 without cables, the optional ELAC Wireless Set Stereo provides the ideal solution – thanks to plug'n'play functionality, it combines sublime ease of use with sublime sound.

The satin black finish gives the SUB 2025 an elegant and almost discreet appearance – due not least to its small dimensions. With a height and width of just 26 cm, this subwoofer is easy to position in any home environment. To enable the sound to develop its full potential from the chosen set-up location, the SUB 2025 operates according to the down-firing principle.

The new SUB 2025 – Small but powerful!

SUB 2025
